Test The SEEDS You Plant

THE MASTER SEED TESTER is an attractive flat dish in which is placed a porous disc and over the disc fits a clear glass bell. *You just put one hundred seeds, (one in each little recess in the porous disc,) add water, put on the glass bell and Nature does the rest.* Nothing could be simpler, nothing could be more effective.

Price \$3.50 complete, post paid, cash with order please. Safe delivery guaranteed.

ERNEST H. WILSON in
 "The Lilies of Eastern Asia"
 wrote of

L. philippinense formosanum

THE finest plants I saw grew among coarse Miscanthus Grass, on a wind-swept knoll, 6,000 ft. above sea level, in Nanto prefecture. They were over 6-feet tall and had relatively broad, uniformly 5-nerved leaves. I gathered seeds and plants raised from them in the garden of Professor C. S. Sargent, Brookline, Mass., blossomed in six months from sowing but were in every respect indistinguishable from others raised from a narrow leaf form which grew at sea level. At low altitudes in Formosa this Lily appears to flower every month in the year, the bulbs take little or no rest, but keep growing and breaking up into colonies. At higher levels, where the seasons are to be defined, the Lily conforms to them and flowers but once a year. That it should blossom in six months from seed is remarkable and shows that the Lily is markedly precocious.

DR. DAVID GRIFFITHS, of the
 U. S. Dept. of Agriculture, writes us:

"*Lilium philippinense formosanum* is grown with us here in the open ground planted 1 in. deep. It blossoms quite profusely the 2nd year in the seed bed. It needs protection the first winter. Seed sown any time from September 1st to November or December, or in early Spring."
